

PROGRAM EDUCATION OBJECTIVES- PEOs

To enable the graduates to be experts in the field of Electrical & Electronics Engineering, with strong footing in science, humanities and entrepreneurial skills. To motivate the graduates to utilize the available resources to analyze, design, invent and develop novel technologies and provide constructive and innovative solutions to societal problems.

To build up ethical adaptive attitude with effective skills in management, teamwork and leadership qualities to be a successful electrical professional.

PROGRAM OUTCOMES –POs

PO1.Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2.Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.

PO3.Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4.Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions for complex problems:

PO5.Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6.The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7.Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8.Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9.Individual and Team Work: Function effectively as an individual, and as a

member or leader in diverse teams, and in multidisciplinary settings.

PO10.Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11.Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12.Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES – PSOs

Incorporating fundamental concepts of mathematics and science to identify, formulate, design and analyze various issues of renewable energy systems by providing developments in the areas of power electronics, power systems, electro mechanical and control aspects.

Apply modern software tools for design, simulation and analysis of electrical systems to successfully adapt in multi disciplinary environments.

An ability to inculcate lifelong learning in electrical instrumentation and automation applications to enhance living standards of society.
